1200-1600ZLB(Q), HLB(Q)

## 1200-1600 ZLB(Q),HLB(Q) type vertical semi(full) adjustable axial/mixed flow pump

7 Advanced technology, perfect hydraulic performance and high efficiency

7 Wide performance coverage and complete models and configurations

7 Traditional structure without
transmission shaft

7 Common motors, cheaper and easy maintenance

## 1, Models explanation

#### Abstract

1. 1600ZLB-70 1600ZLQ-70N

1600--vertical discharge diameter (mm) ZLB--vertical partly-adjustable axial flow pump ZLQ--vertical axial flow pump without transmission shaft (top discharge) $70-1 / 10$ of the pump specific speed , which means that the pump specific is 700 N --Means new hydraulic models C--Means that the pump impeller diameter is larger than the standard. $A$ and $B$ means the smaller impeller. (The mixed flow pump is the same.)

## 2. $1600 \mathrm{HLB}-50$ 1600HLQ-50N

1600--vertical discharge diameter (mm)
HLB--vertical partly-adjustable mixed flow pump
HLQ-vertical mixed flow pump without transmission shaft (top discharge)
$50-1 / 10$ of the pump specific speed ,which means that the pump specific is 500
3. When placing an order ,must make sure the pump blade angles, device installation form, installation height $\mathrm{L}, \mathrm{L}$, the motor power, voltage, speed and so on. Then write remarks.

## 2, Main application

- Industrial and mining drain, municipal engineering, sewage treatment plant
- Iron industry, metallurgy, power plant,shipbuilding, water plant circulation, water supply and so on
- Hydraulic engineering, river harnessing.
- Irrigation, aquaculture, saltworks

## 3, Work conditions

1. Single pump capacity: $2.5 \mathrm{~m}^{3} / \mathrm{s}-12 \mathrm{~m}^{3} / \mathrm{s}$ 。
2. Head: $2 \mathrm{~m}-\mathrm{-} 30 \mathrm{~m}$
3. Pump discharge diameter: $1200 \mathrm{~mm}---1600 \mathrm{~mm}$

4, Medium: clean water, river water, waste water, ruin, sewage and other liquid like water in chemical and physical performance.

5, Motor:
Voltage: 380V,660V,6000V,10000V, 50HZ
Protection class: IP23, IP44
Insulation class: B,F
Work environmental temperature: 55 Turn down the motor power level when the temperature is
higher than 40
6, Impeller rotation direction: The impeller rotetion direction is clockwise in view from motor to pump.

## 7, Other notes:

1) Suction form:

The suction trumpet is suitable for eruciform, rectangle, polygon, circle, semicle inlet pool.
2) Discharge form:
$\mathrm{ZLB}(\mathrm{Q}), \mathrm{HLB}(\mathrm{Q})$ discharge form is $60^{\circ}$ elbow discharge with flange joint

## 4, Product feature

- This series of pumps performance coverage is wide. The models and specification is complete.

The series of pumps are suitable for various work conditions.

- The pump has good hydraulic performance and high efficiency.
- The pump is equipped with common motor which is cheaper. And the maintenance is more convenient and safer to prevent water.

## 5, Structure diagram

## Diagram 1

Note: The diagram above is a typical ZLB structure diagram.

## Diagram 1

Structure diagram 2(motor bears axial force)
ZLQ type structure diagram(pump discharge diameter >=1200mm) If there is no adjustment, it is partadjustable ZLB pump.

Note: It is $\mathrm{ZLB}(\mathrm{Q})$ typical structure diagram above.

## 6, Structure introduction

## 1, All-adjustable pump

For all-adjustable pump, pump blades can be adjusted without disassembling any parts: The mechanical adjustment is set between motor and pump or on the motor top. It can adjust the pump blades completely in cooperation with the impeller and pump shaft inner parts. The adjustable blade range: $-20^{\circ}---+4^{\circ} \ddot{y}$ Before starting the pump, adjust the blade angles between $-18^{\circ}---20^{\circ}$ . The start torque is small and smooth. Can adjust the blade angles to be suitable for the work conditions after start.
a) Top-placement type adjustment: The adjustment is set top of the special motor whose shaft is must hollow. The axial force is born by the motor floor.
b) Middle-placement type adjustment: The adjustment is set between the pump and the motor whose shaft needn't be hollow.

We can also design and manufacture the pump controlled by hydraulic pressure according to customer' $s$ requests.

## 2, Other structure instroductions

1)In pump station , the pump body is under the pump floor and the motor and transmission parts are set on the motor floor. The motor and the pump are connected by specific transmission shaft.
2)The weight of the motor, transmission parts and pump rotor and the axial force is bore by the motor floor. The pump floor just bears the pump casing weight and the other force when the pump runs.
3)There are two types of pump installation forms, open (wet)type and closed(dry) type. The pump is hung into the hole through the motor hole, which is more convenient for check and maintenance.
4)The transmission shaft can be adjustable according to the different motor floor height. If the transmission shaft is too long, must equip the pump with middle support parts and the pump station must have corresponding support base.
5)There is transmission shaft adjustable nut for transmission parts. And it can adjust the pump impeller position and remove the installation height error.
6) The impeller is adjustable. Can adjust the blades angle after disassemble the impeller parts.
7) The stainless steel sleeve is set between the pump shaft and the water guide bearing which has good anti-rust performance.
8) Shaft seal: It is packing seal. The leakage water is collected and discharged by the drain pipe.
9)Water bearing lubrication: There is a shaft sleeve set outside of the pump shaft to protect the water bearing for the sewage with some particles. And there is a seal closed to the two shaft sleeve ends. The water pressure is 0.2 MPa higher than the pump head. And the water enters from the top elbow water lubrication joint pipe and flows into the pump medium after lubricating and chilling the water bearing.

3, Specific bolt seal gasket: When it is closed (dry) type installation, the specific bolts seal gasket is set between the bolt and elbow flange contact surface. The specific bolt seal gasket is to prevent the pool water to leak to the pump floor through the bolt.

4, Base ring and gasket:
When it is trumpet suction type and closed (dry) pump floor installation, the base ring is needed. The base ring and pump floor base are buried in advance according to the requests. The seal gasket is set between the pump and the joint face to prevent the pool water leak into the pump floor. When it is flow channel suction type, the pump is connected with the base gasket and it is actually a dry type device. So must take the leakage problem into account when connecting the base ring with the suction entrance.

5, Others: the straight pipe, $30^{\circ}$ elbow, expansion joint parts and others parts behind the pump outlet elbow are optional.

## 7, Main components material

1, Common supply: trumpet, guide vane, elbow, impeller base, motor base: HT200/Q235
Pump shaft, transmission shaft: 45\# steel blades: ZG270~500 water guide bearing: HT200+natural rubber shaft seal: oil-impregnated graphite packing

2, optional supply: Blades: bronze,SS,QT
Impeller base: bronce,SS, QT
Pump shaft: 2Cr23, 40Cr
Water bearing: HT200+polyurethane rubber/Thordon

If the customer needs other material, it can be discussed.

## 8 , Scope of supply

1, Main pump, transmission parts, motor(optional), specific tools
2, Make sure the closed installation : base ring
3, Make sure other customer supply requests

## 9, Order notes

1, It should be explicit: product models and names, performance(Q, H orblade angle,speed, NPSHr), motor, pump installation form, motor floor installation form, $\mathrm{L}(\mathrm{L} 1)$ length, medium.

2, Discussed attcahed components:anchor bolts, clap door, $30^{\circ}$ elbow, straight pipe, diffuser, expansion joint, joint bolt and other request except from common supply material request.

## 10, Performacne curve, outside installation diagram is behind

1, As different types of motor power levels are inconsistent in the actual matching motor power, due to motor series reasons, may cause a slight difference with the motor performance parameters of the motor matching table, and performance parameters of the table matching motor power is in accordance with The highest lift point configuration, if the actual maximum lift is lower, supporting power can be adjusted as appropriate

2, In the outside drawing ,more than 450 KW large motor motor base installation dimensions may be adjusted and some motors need to be designed again. So the outside installation diagram and dimensions are not supplied in this book. Contact with tech sector for the scheme.

3, ZLQ, HLQ performance curve is similar with the ZLB, HLB performance curve with the same configuration. (Note: performacne curve and outside installation diagram are shown behind)

4, Select the suitable motor power acording to the maximum head and running angles.

## 1200ZLB(Q) outside installation diagram.
