

ISO9001 Certified(version 2015)

The 5th Generation **Digital Integrated**
Frequency Adjustable Water Supply Equipment

- All parameters detection: not only pressure and frequency, but including flow, power parameters and energy efficiency parameters etc.
- Digital control : the double PLC design of control system, it's the true full digital control
- All - frequency integration: Professional tailored backpack pump inverter, combination of mechanical and electrical integration, to create intelligent E pump
- Fully intelligent control: All parameters, all digital, all based on the frequency, for the second device is the realization of intelligent control of a fully functional primary

SHANGHAI KAIQUAN GROUP INTRODUCTION

Shanghai Kaiquan pays attention to the combination of service, technology and business to realize value-added services. 300 technical engineers provide customers with a full range of professional solutions. Use the advanced ERP system and CRM system to control the order process. 24 sales branches, more than 400 offices, service network covering the whole country, the implementation of "Blue Fleet" service and 4-hour rapid response mechanism, ready to respond to user needs, to create a reliable industry boutique. Facing the future, Shanghai Kaiquan has formulated a development strategy of "leading the rise of China's pump industry", and is committed to the localization of high-end pump products in nuclear power, large thermal power, petrochemical, military, desalination and other fields, and strives to shape a world-renowned brand. Become an internationally competitive multinational company and enter the top ten in the world pump industry.

Shanghai Kaiquan is a large-scale comprehensive pump group integrating design, production and sales of pumps, water supply equipment and pump control equipment. It is a

leading enterprise in China's pump industry. With total assets of 3.8 billion yuan, it has 7 enterprises and 5 industrial parks in Shanghai, Zhejiang, Hebei, Liaoning, Anhui and other provinces and cities, covering an area of 670,000m² and a building area of 350,000m². It has 7 enterprises and 5 industrial parks in Shanghai, Zhejiang, Hebei, Liaoning, Anhui and other provinces and cities.

The group has more than 4,500 employees, including more than 500 engineers and technicians. It is mainly composed of well-known domestic water pump experts, doctoral masters, middle and senior engineers and senior craftsmen. It has formed an echelon-type talent structure with innovative thinking.

Shanghai Kaiquan won the "Shanghai Quality Gold Award", "Shanghai Top 100 Technology Enterprises", "Shanghai Famous Brand Products", "China Quality Credit AAA", "National Contract Credit Rating AAA", "Quality, Credit, Honorary services such as "Three Excellent Enterprises", "China's Most Competitive Commodity Trademark" and "Five-Star Service Certification" have been selected into the National Top 500 Machinery for many years.

Certificates

Secondary water supply equipment energy saving certification

National Construction Industry Science and Technology Achievements Promotion Project

'WFY series booster equipment, KQF series double model water supply equipment' China Green Star Certificate

Approval of Sanitation Permit for Drinking Water Hygiene and Safety Products in Shanghai

Quality Management System Certification ISO 9001:2008

Multiple invention patent certificates

Product Overview

Product technology background

The ultimate development direction of secondary water supply equipment is intellectualization, the current variable frequency water supply equipment adopts the traditional relay control + digital control hybrid technology solution, which leads to the following problems:

- **Low digitization**

Since the conventional relay control is still retained, the main switch, indicator light, relay, and traditional instrumentation are still used in a large amount, which makes the number of wires large and difficult to standardize production.

- **Low generalization**

The hybrid control systems of different manufacturers are very different, depending on the special functions of the inverter, the controllers rely on the code masters, and the special black box components, which cannot be unified and standardized, resulting in poor long-term operation and maintainability.

- **Low intelligence**

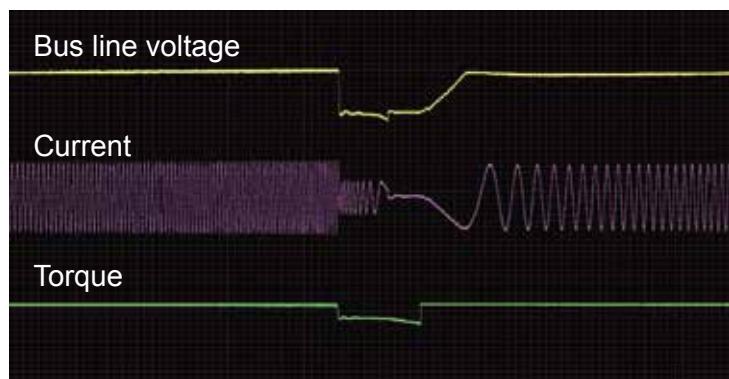

Usually only the pressure and frequency are detected, only the basic control can be realized. Due to the lack of parameters such as flow, power, energy efficiency and control decisions, the analysis and adaptability of the equipment is greatly reduced, and various intelligent controls cannot be implemented.

In response to the above problems, Kaiquan developed the fifth-generation dual-PLC digital integrated full-frequency water supply equipment with 20 years of engineering experience and innovative technology in the water supply industry. This product not only completely solved the above problems, but also realized for the first time: full parameter detection, all digital control, full frequency conversion integration, full intelligent control.

Product advantages

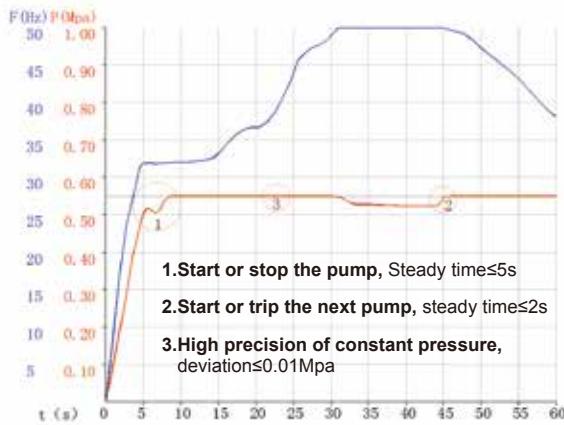

High reliability

Reliability design (long life), the core component design life is three times that of conventional products, and the powerful grid adaptability. When the grid voltage fluctuates, the inverter automatically keeps the output voltage constant. IP55 control cabinet, IP55 converter, PCBA Thick coating, better dust and moisture resistance, Dual PLC redundancy technology, the control system is spare for each other, safe and reliable

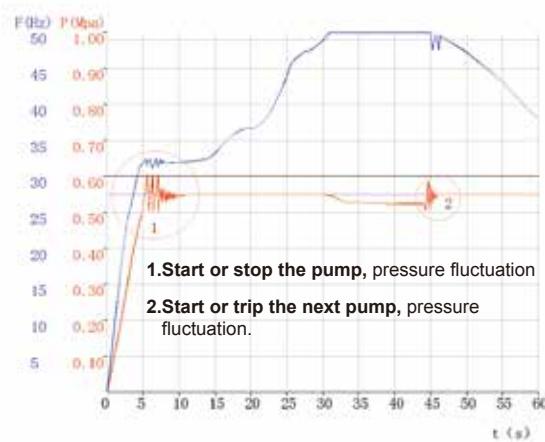

High performance

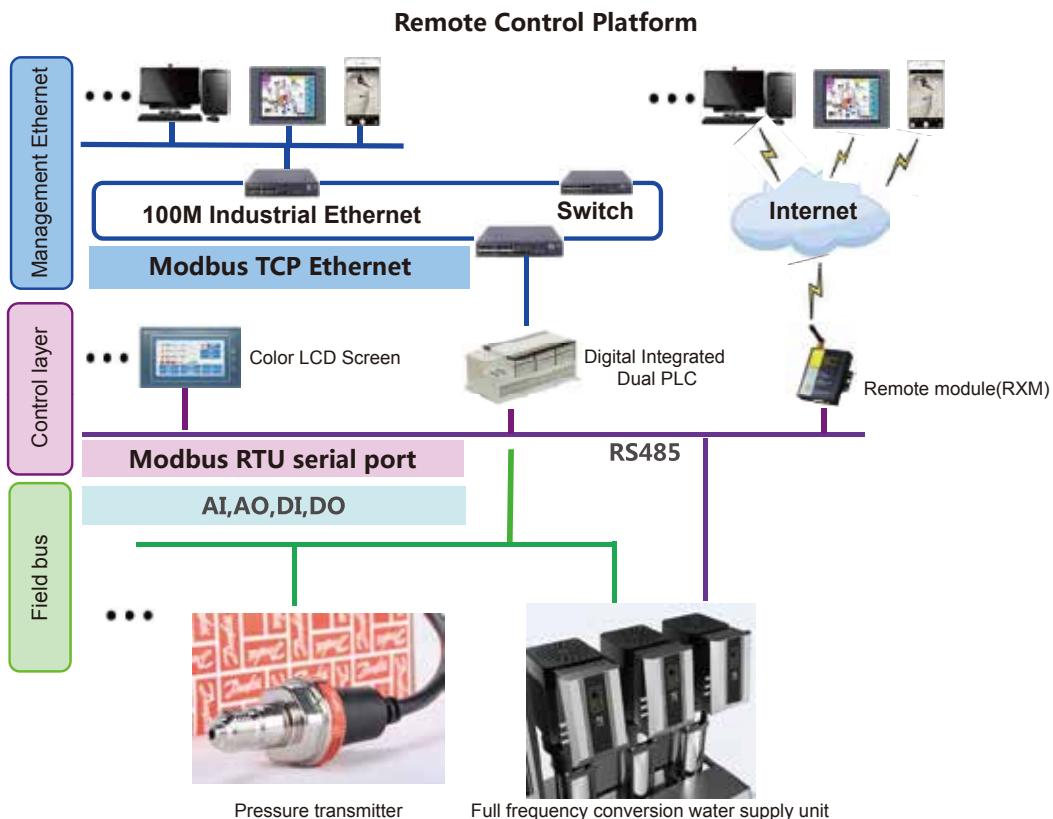

Full frequency conversion + high performance digital PID, stable water supply pressure and good comfort
 Intelligent control strategies such as pressure + flow, power and other big data collection, minimum energy consumption
 Digital + early warning, alarm mechanism, expert remote diagnosis
 Cloud + water supply, intelligent monitoring, realize zero-distance inspection of pump room

Digital full frequency conversion performance curs

General single frequency Conversion performance curves

High energy-efficient

Pump and motor configuration

Energy certification(CQC) for all pumps
IE3 motor

Variable flow pressure technology

Small and middle flow, Energy Saving 3-5%

Full inverter control technology

Designation flow, energy saving 3-5%

Energy saving technology patent

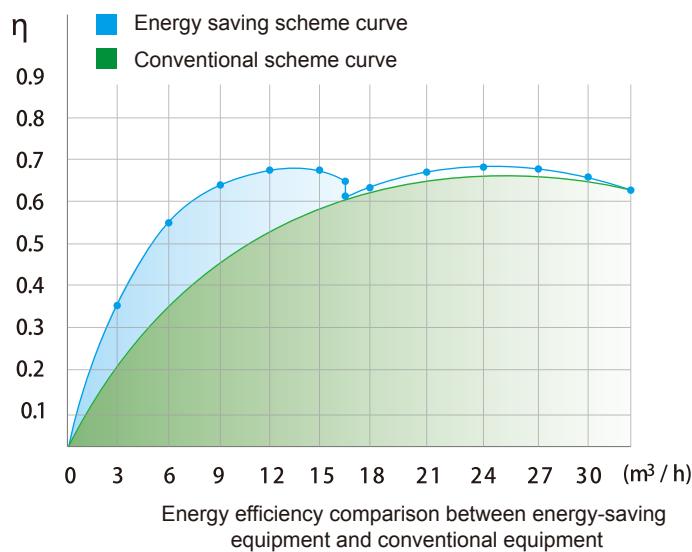

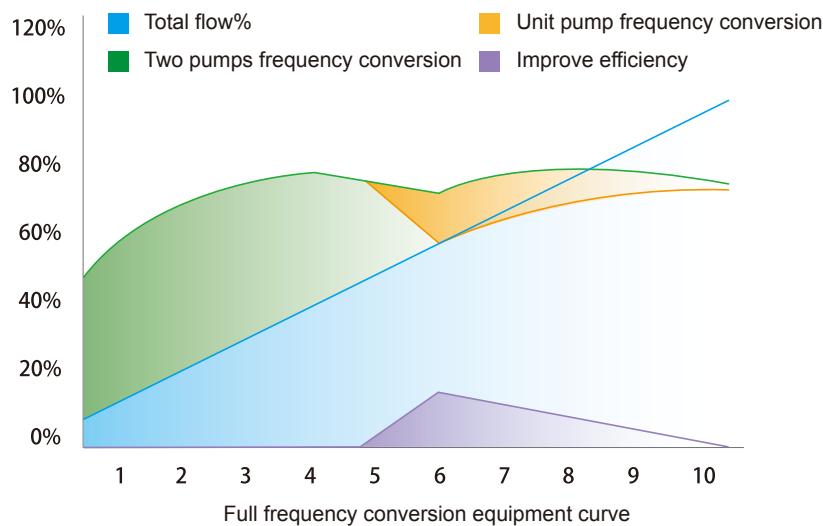

Average energy savings get to 20%

Expansion tank

Micro flow, Energy Saving 3-5%

Increased inlet and outlet pipe diameter

Large flow, energy saving 3-5%

High quality

Cabinet advanced design

Structural design using the German Rittal standard
Overall spraying process
Improve the corrosion resistance and high temperature resistance

Nuclear welding process level

Product is assessed by nuclear power welding process

Stainless Steel impeller and difusser

Total quality control

ISO 9001 Quality Management System Certification
Total quality management
Advanced product quality planning(APQP)
Failure mode and effect analysis(FMEA)

Corrosion resistant epoxy coating

The inner wall coating is hygienic and environmentally friendly, with uniform thickness

Scope of application

Water for live: high-rise building, residential area, villa, etc.

Public places: hospitals, schools, stadiums, airports, etc.

Commercial buildings: hotels, office buildings, department stores, etc.

Operating elements

Auto start and stop

When the water increases and the equipment outlet pressure drops to the starting pressure, the equipment starts and the intelligent constant pressure runs. Expansion tank guarantees pressure at small flow rates.

Auto speed regulation

According to the change of water consumption, the speed of the unit is adjusted intelligently. Automatically increase speed when water consumption increases, automatically reduce speed when water consumption is reduced, dynamically adjust to ensure terminal pressure.

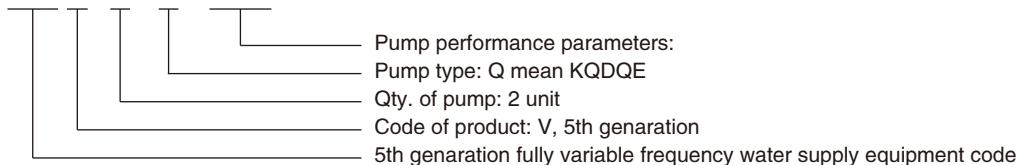

Intelligent control

The device has the ability to sense big data such as pressure, flow, and power, the lowest power control technology to intelligently control the operation of the pump.

Scope of application

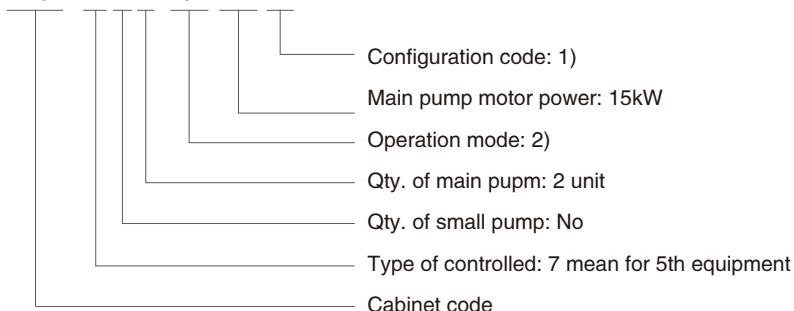

KQGV series equipment model meaning example:

KQG V - 2 - Q - 1680

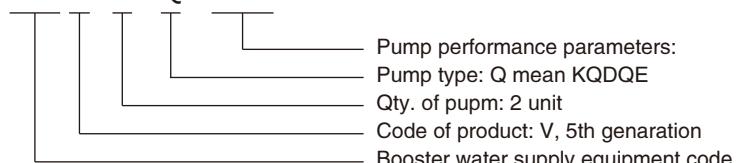

Cabinet model meaning example:

KQK 7 0 2 QB-15 M

WFYV series equipment model meaning example:

WFY V - 2 - Q - 1680

- 1) Control cabinet configuration
M-standard, PLC, converter and LV electrical components used top china brand.
- 2) Operation type
QB-Full frequency conversion(every pump have a converter), all pumps run alternately and alternated

mark: This product can be extended to KQF series non-negative pressure water supply equipment,
please contact us for details.

Product specifications and performance

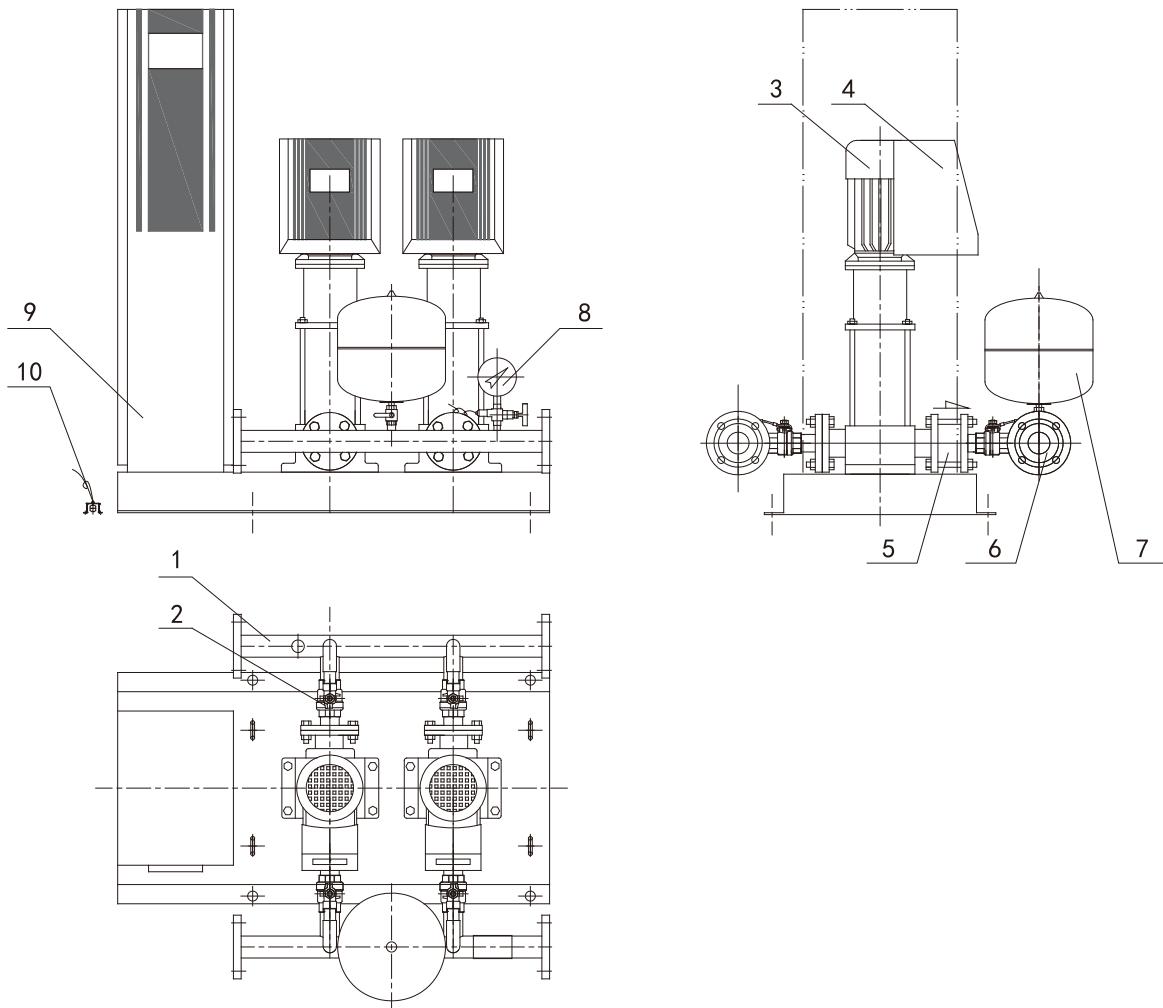

Standard product datasheet

Description		KQGV standard series
Flow		5-160m ³ /h, by pump.
Head		20-160m, by pump.
Range		40%-100% head (Full frequency conversion control)
Accuracy		≤1mH ₂ O
Steady time		≤5s
Operation method		Master and standby mode (both modes have manual and auto modes)
Start method		Frequency conversion soft start
Control method		Equipment outlet constant pressure or automatic variable pressure control (Analog end constant voltage control)
Running method		QB (Full frequency conversion operation)
UI		Digital instruments, color touch screen
Protection/alarm		Short circuit, overload, phase loss protection, indicator alarm and inverter self-protection
Troubleshooting		Pumps and systems all alternated
Meterial		Over flow parts material SS304
Protection grade		Motor IP55, cabinet IP55, convertor IP55
Site and utility data	Installation conditions	Loadable concrete base
	Power supply	380V (+10%, -15%), 50Hz, ground wire≤4Ω
	Environment	Indoor, 0°C -40°C, no corrosion, no flammable or explosive gases
	Relative humidity	≤90% (20°C), no condensation
	Elevation & vibration	≤1000m, ≤5.9m/s(0.6g)

Technical performance and function

Products with clear dimensions in the pump sample are standard, KQGV, WFYV series meet datasheet.

Main parts name			
Item	Inlet manifold	Item	Title
1	Inlet manifold	7	Expansion Tank(diagram is 12L)
2	Ball valve	8	pressure sensor(or electric contact pressure gauge)
3	Vertical multistage pump	9	control cabinet
4	Digital integrated frequency converter	10	leakage sensor
5	Check valve	11	Vacuum suppressor
6	Outlet manifold	12	Steady flow tank

Main parts name			
Item	Inlet manifold	Item	Title
1	Inlet manifold	7	Expansion Tank(diagram is 12L)
2	Ball valve	8	pressure sensor(or electric contact pressure gauge)
3	Vertical multistage pump	9	control cabinet
4	Digital integrated frequency converter	10	leakage sensor
5	Check valve	11	Vacuum suppressor
6	Outlet manifold	12	Steady flow tank

Cloud + Water Supply

Cloud + water supply Cloud & internet+ Fusion

The fusion of kaiquan's cloud service and Internet + can make users more convenient.

Through the control center of kaiquan, users' data will be fed back to the secondary monitoring platform and be compared with the cloud data model and pipe network historical data ,then being sent to the after-sales service center. The final result will be fed back to the monitoring platform.

In the later use, any failure or problem in every link can be controlled on the remote monitoring platform. The problems can be quickly fed back to headquarters, and be solved systematically. At the same time, kaiquan's equipment can also make targeted overall service solutions according to the personalized requirements of customers , helping customers solve various problems in the use of products.

Ordering considerations

Question	Attention
1. Product specifications	Products that exceed the standard configuration can be ordered after technical review (Performance parameters, power, altitude, temperature and humidity)
2. Device configuration and function	Sample standard equipment is equipped with 1 spare, 2 spare, 3 spare and 1 spare pump. The inlet and outlet caliber of the pump is the same as that of the pump outlet. The inlet and outlet caliber of the main pipe of the pump unit is considered as less than 1.8/s of the flow rate (excluding the flow rate of the spare pump). For other aspects of equipment configuration, please refer to the relevant contents of the sample.
3. Equipment application	The standard application of products is the domestic water supply for all kinds of buildings. Other applications must clarify the corresponding process requirements and the corresponding range of supply.
4. Structure/supply mode	In order to facilitate the installation and layout of the house, all kinds and series of products can be designed and size arranged according to customer's requirements. The customization procedure is: customer's requirements (drawings, documents), fax, design, drawing, customer's confirmation and manufacture according to the drawings. The equipment can be supplied in bulk, installed on site, and the scope of supply needs to be determined separately. This form of supply does not simulate shipment from the factory. Field test is required for line test.
5. Package	If there is no special explanation, when the equipment is out of factory, the pump group and the control cabinet are packed in wooden cases.
6. Pipeline safety	The product can withstand static pressure test of 1.5 times fixed working pressure. In the application of the system pipeline and water appliances, the corresponding working pressure should also be withstood without damage. When the pump head is high, in order to prevent overpressure burst, an automatic pressure relief valve should be installed in the pump room and a diversion pipe should be installed to the catchment well. Special attention should be paid to the pipeline of non-negative pressure water supply equipment. The maximum pressure that may occur is equal to 13-1.4 times of the rated lift of the pump plus 04Mpa (inlet pressure).
7. Sample difference problem	In the process of continuous improvement, some details of the installation size and equipment provided by the sample may be different from the actual product. If you need accurate installation size or other improvement information or have questions about the sample, please contact the Technical Section of Kaiquan Pump Industry Fourth Branch.

The online service center

Operation maintenance support system

- Professional service team
- Timely handling of various mechanical or electrical faults, 20 years of service experience
- Provide emergency spare parts
- Nearly warehousing and quick response
- Regular inspections and return visits
- Holidays still provide protection
- Reduce labor and maintenance costs

Manufacturing capacity

10000m² heavy workshop

1200 advanced production and inspection equipments

KAIQUAN now equipped with 1200 sets advanced production and inspection equipments

Including 56 imported equipments, 24 large-scale processing equipments, and more than 300 CNC machining equipments

Heavy workshop, construction area over 10000m², investment amount reached 150 million (CNY)

These advanced equipments have comprehensively improved KAIQUAN's manufacturing and manufacturing capabilities and reached international standards

Major client

Address: No. 4255/4287 Caoan Road, Shanghai

Group Call Center: 400-002-6600
